## Ambient Temperature vs Maximum Coil Voltage

**Note:** The maximum voltage refers to the maximum value in a varying range of operating power voltage, not a continuous voltage.

**Typical information for reference only**

The following data is provided as experimental and/or calculated data for reference only. These fall under the category of typical behaviour and the operation of individual relays will vary according to the exact operating conditions

Typical Operate / Release times	1 pole model	2 pole model
AC Type (operate / release time)	6 / 8 ms	6 / 10 ms
DC Type (operate / release time)	12 / 4 ms	11 / 15 ms

**Multiple Contact DC Switching Capacity**

Switching capacity of DC resistive load

**Load Reduction Factor**

For AC inductive loads (such as solenoids, contactor coils, etc.) the reduction factor corresponding to  $\cos(p.f.)$  (cosine of power factor) is multiplied by the rated current in order to identify the maximum allowable current. This approximation is not valid for loads with high inrush currents such as electric motors or fluorescent lamps.

## Precautions

### ⚠ Caution

Do not use the test button for any purpose other than testing. Be sure not to touch the test button accidentally as this will turn the contacts ON. Before using the test button, confirm that circuits, the load, and any other connected item will operate safely.

### ⚠ Caution

Check that the test button is released before turning ON relay circuits.

### ⚠ Caution

If the test button is pulled out too forcefully, it may bypass the momentary testing position and go straight into the locked position.

### ⚠ Caution

Use an insulated tool when you operate the test button.

## Precautions for P2RF-□-S Connection

- Do not move the screwdriver up, down, or from side to side while it is inserted in the hole. Doing so may cause damage to internal components (e.g., deformation of the clamp spring or cracks in the housing) or cause deterioration of insulation.
- Do not insert the screwdriver at an angle. Doing so may break the side of the socket and result in a short-circuit.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.
